

MODULARMAILING

Grows as your franking needs grow.

centormail franking machine

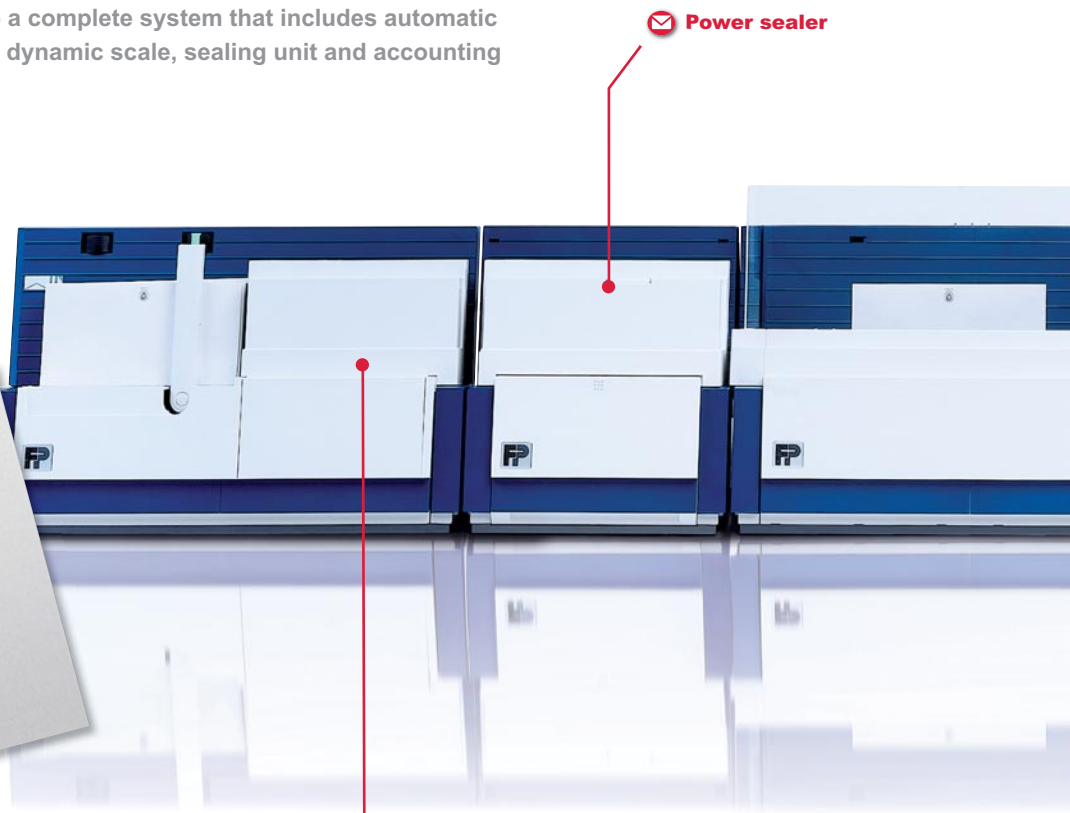

YOUR MAIL IS OUR BUSINESS

DYNAMIC WEIGHING AND FRANKING THE SOLUTION:

centormail franking machine

FOR ALL YOUR MAILING NEEDS

centormail is a modular franking system that can be expanded as needed by users with medium to high mailing volumes. The basic model can grow into a complete system that includes automatic feeder, an additional dynamic scale, sealing unit and accounting software.

✉ Power sealer

MAXIMUM OPERATING COMFORT

High-tech, but easy and intuitive to operate. A clearly laid-out graphic display guides you quickly and confidently through all procedures and accounts. At the touch of a button, centormail displays complete information about the letter you are franking, including the applicable postage, images of available advertising slogans and total remaining postage.

✉ Automatic envelope feed for letters up to 20 mm thick

Already a hit – the vertical envelope transport! Letters in every format – from post card to B4-letter – drawn from a stack and effortlessly franked.

Dynamic scale

The dynamic scale module is ideal for efficiently handling large amounts of mixed mail. It automatically identifies the envelope format, thickness and weight (standard, oversize or others). This assures that every letter is franked with the right postage.

Always makes an excellent impression

Modern inkjet technology provides clean, low-cost prints. An optional tank system provides even greater efficiency. Letters glide past the print head with minimal contact for whisper-quiet operation. Perfect for every office environment.

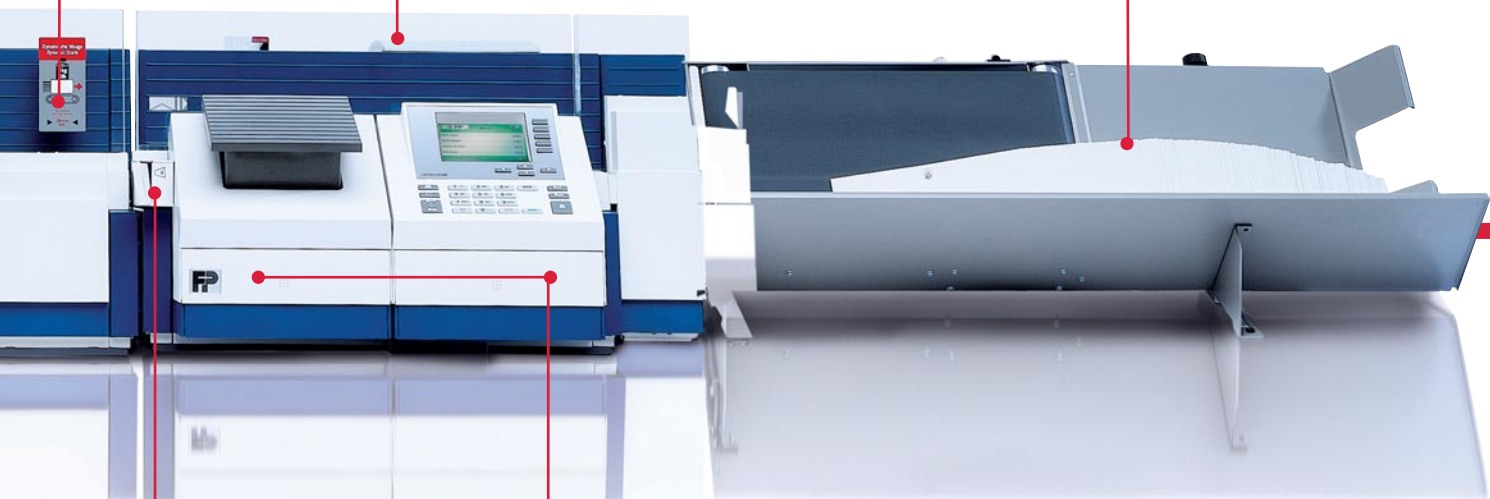

Franking unit with static scale

Whatever you wish to frank, the integrated 5-kilogram static scale is at your service. It weighs the letter, calculates and displays the correct postage. For oversize packages print the frank on an adhesive label delivered by the integrated label dispenser.

Power stacker

Your mail is franked in a flash and collected here, ready to be mailed.

Pulls out all the stops

Little things that make a difference. Store adhesive labels, envelopes, etc. in the practical bins under the scale and franking unit.

Your »ticket« to get started

A Master Card to activate all functions. Set up and assign department accounts that authorized personnel can access with their individual User Card.

Label dispenser

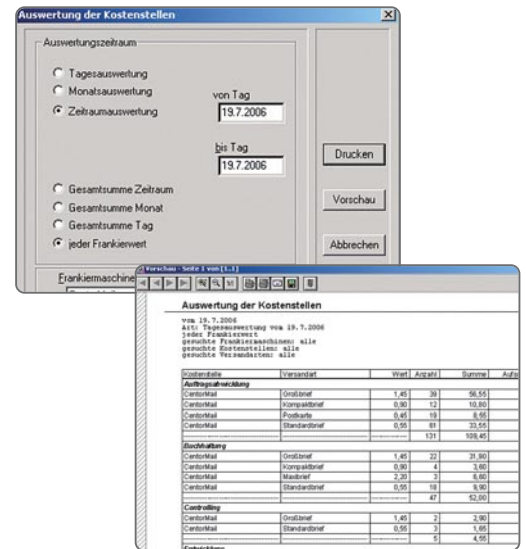

Indispensable for thick letters and small packages. Enter the number of labels needed, and let centormail print and eject adhesive labels with postage.

MANAGE YOUR FRANKING DATA: KARAT SOFTWARE

Postage accounting software offers a comfortable solution to managing and tracking postage used by individual departments and franking machines. Depending on the version available in your country, this integrated software performs a variety of functions: Track as many department accounts as you wish to set up. Monitor up to four franking stations. Generate clear reports on postage consumption for freely-selectable time periods. Optional data export to other applications like Excel.

SUPPORTS ALL RELEVANT POSTAL REQUIREMENTS, E.G. FRANKIT® AND OTHER VALUE-ADDED SERVICES

centormail – one step ahead. Supports all FRANKIT® services offered by Deutsche Post.

- PremiumAdress is a new way of keeping address data up-to-date. The customer gives the Post advance instructions on how to handle undeliverable or forwarded mail and receives address correction data electronically. Enables customers to automatically and quickly update address data.

- Order management. The Post assigns a special contract number to simplify franking mass mailings.
- Special services printouts. When franking registered letters or other special services, this feature automatically generates the accompanying documentation that must be submitted when the letter is mailed. centormail also saves all codes-numbers generated in the course of a day and, if desired, prints labels with which delivery lists can be completed.

AVAILABLE COMPONENTS:

Franking unit with static scale and label dispenser

Automatic envelope feed feeds envelopes of different formats from the stack into the vertical envelope transport

Feed deck enlargement for loading up to 300 envelopes at once

Power sealer

Dynamic scale up to 60 letters/minute detects envelope format, thickness and weight and automatically calculates the correct necessary postage

KARAT software For professional postage accounting. Monitor and manage an unlimited number of department accounts in a central database.

Power stacker Neatly stacks finished envelopes and makes it easier to spot handling errors. Stacked envelopes can be removed without stopping the machine.
