

POSTAGE**STAR**

Best in class.

optimail 30 franking machine

YOUR MAIL IS OUR BUSINESS

WHEN THE TASK IS FRANKING,
THE SOLUTION IS THE

optimail 30 franking machine

FRANKING MADE EASY

The **optimail 30** is optimally equipped for modern franking standards. What that means for you: More security, because all relevant data like item number and serial number, type of frank, product key etc are contained in a two-dimensional matrix code. And more comfort, because special services can be included in an additional one-dimensional barcode that you print at the same time. Just select the desired product and the correct postage appears on the display. There's no additional label to apply and the job is finished faster.

TOP GRADES IN ALL FIELDS!

The space saving, compact system is ideal for small to medium mail volumes and makes it possible to frank a wide variety of postal products.

The **optimail 30** has all of the advantages of a forward looking franking system: different advertising slogans, detailed text messages, multiple cost accounts, and an integrated modem for downloading postage values. Another advantage: a function for adding a date stamp on incoming mail.

USER-FRIENDLY- OF COURSE

Regardless of the advanced functionality, the **optimail 30** is extremely easy to use! The most important postal products can be immediately selected with two touches of a button. The large, backlit display is also unique in its class! Menu navigation is intuitive and self-explanatory.

Franking can indeed be fun!

Sealer

The letter sealer is an optional add-on for machine-sealable envelopes.

The sealer moistens and seals a letter in one step.

Optional: Integrated scale

Space saving, integrated scale; the scale precisely detects weight and calculates the correct postage for your letters and packages.

Self-explanatory

Unique for its class – the big, back-lit display! With self-explanatory, intuitive menu instructions.

Makes franking fun!

Postage: Online

With the integrated modem, you are »online« in an instant. In the future, other types of data, such as postage rate tables, will be available online (dependent on the country-specifics).

Long-lasting, good value, high-quality imprint

The thermotransfer print head and high-quality ink ribbon cassette are an advantage in this class of machines: unbeatable price and ongoing value due to the low consumption. The high resolution imprint (300 dpi) gives your envelopes a crystal-clear frank.

Chip-card reader for every need

Simplified access control, quick loading of new advertising slogans, and, with the use of access cards, fast and secure cost center accounting – ideal for office environments and office co-ops.

Electronic text messaging

You can include a text message in addition to or in replacement of an advertising slogan. Only FP makes it possible to print up to five lines of text that include up to 20 characters per line!
